

# Technically Speaking

Sharing the promise, removing the fear  
and easing the pain of technology

## A Lifetime of Experience

Gary Braley has worked in technology throughout his career and his passion has always been to explain technology to non-technical audiences. He worked in aerospace and was a developer, project manager and consultant on healthcare information systems. He was also a high school teacher. *Gary always played the role of "interpreter" - translating between the programmers and the users.*

## Basic to Advanced Topics

### 1 - Mobile Technology 101

Smartphones and tablets are everywhere but many people have not yet taken the plunge. If you don't own one or just make phone calls, text and play games, this class will take you to the next level.

### 2 - iPad 102

Millions of people have an iPad but few have any idea of the power and capabilities of this next generation computer. You and your associates can only really benefit from your iPads if you know what they can do and how to use them.

### 3 - Business Application of Tablets

We've been enamored with iPads for six years now but are tablets really business productivity tools? We'll review important facts to consider when you decide whether a tablet can replace your laptop.

### 4 - Tech Roundtables

This is your chance to meet in a small group to have your questions answered. The discussion will focus on beginning users and not on the "techies" that often dominate these events.

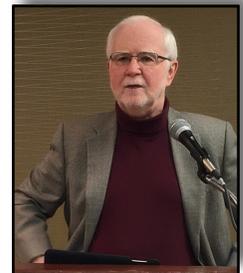

### 5 - The end of Credit Cards

One of the hottest topics today is the way payment systems are changing. This involves the total overhaul of credit cards to improve security and the use of mobile devices for increased convenience.

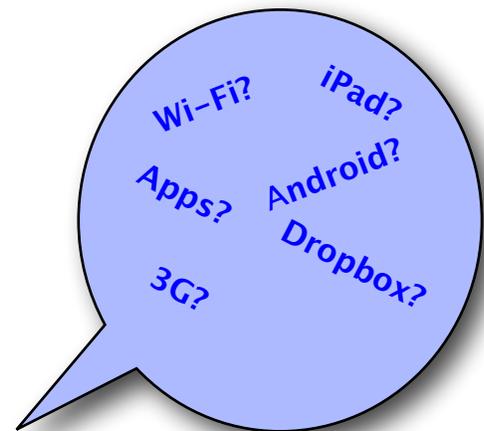

### ALSO

- Where Are We Heading in Technology
- How Things Work - what exactly is the Digital World
- Digital Photography - why good cameras take bad pictures
- The Internet of Things - The Internet like you've never seen it before.

*"My job is stay up-to-date on the technology that is affecting everything we do and interpret it for you. You don't have time to process the constant flood of information and I can help."*
